

Lecture 13:

Camera Projection II

Reading: T&V Section 2.4

Recall: Imaging Geometry

**Object of Interest
in World Coordinate
System (U,V,W)**

Imaging Geometry

Camera Coordinate System (X, Y, Z).

- Z is optic axis
- Image plane located f units out along optic axis
- f is called focal length

Imaging Geometry

**Forward Projection onto image plane.
3D (X, Y, Z) projected to 2D (x, y)**

Imaging Geometry

Imaging Geometry

**Camera
Coordinates**

**Image (film)
Coordinates**

**World
Coordinates**

**Pixel
Coordinates**

Forward Projection

We want a mathematical model to describe how 3D World points get projected into 2D Pixel coordinates.

Our goal: describe this sequence of transformations by a big matrix equation!

Intrinsic Camera Parameters

**World
Coords**

U
 V
 W

**Camera
Coords**

X
 Y
 Z

**Film
Coords**

x
 y

**Pixel
Coords**

u
 v

Affine Transformation

Intrinsic parameters

- Describes coordinate transformation between film coordinates (projected image) and pixel array
- Film cameras: scanning/digitization
- CCD cameras: grid of photosensors

still in T&V section 2.4

Intrinsic parameters (offsets)

film plane
(projected image)

pixel array

$$u = f \frac{X}{Z} + o_x \quad v = f \frac{Y}{Z} + o_y$$

o_x and o_y called image center or principle point

Intrinsic parameters

sometimes one or more coordinate axes are flipped (e.g. T&V section 2.4)

$$u = -f \frac{X}{Z} + o_x \quad v = -f \frac{Y}{Z} + o_y$$

Intrinsic parameters (scales)

sampling determines how many rows/cols in the image

Effective Scales: s_x and s_y

$$u = \frac{1}{s_x} f \frac{X}{Z} + o_x \quad v = \frac{1}{s_y} f \frac{Y}{Z} + o_y$$

Note, since we have different scale factors in x and y, we don't necessarily have square pixels!

Aspect ratio is s_y / s_x

Perspective projection matrix

Adding the intrinsic parameters into the perspective projection matrix:

$$\begin{bmatrix} x' \\ y' \\ z' \end{bmatrix} = \begin{bmatrix} f / s_x & 0 & o_x & 0 \\ 0 & f / s_y & o_y & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix} \begin{bmatrix} X \\ Y \\ Z \\ 1 \end{bmatrix}$$

To verify:

$$\begin{aligned} u &= \frac{x'}{z'} \\ v &= \frac{y'}{z'} \end{aligned} \quad \Rightarrow \quad \begin{aligned} u &= \frac{1}{s_x} f \frac{X}{Z} + o_x \\ v &= \frac{1}{s_y} f \frac{Y}{Z} + o_y \end{aligned}$$

Note:

Sometimes, the image and the camera coordinate systems have opposite orientations: [the book does it this way]

$$\begin{aligned} f \frac{X}{Z} &= \downarrow -(u - o_x)s_x \\ f \frac{Y}{Z} &= \downarrow -(v - o_y)s_y \end{aligned} \quad \longrightarrow \quad \begin{bmatrix} x' \\ y' \\ z' \end{bmatrix} = \begin{bmatrix} -f/s_x & 0 & +o_x & 0 \\ 0 & -f/s_y & +o_y & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix} \begin{bmatrix} X \\ Y \\ Z \\ 1 \end{bmatrix}$$

Note 2

In general, I like to think of the conversion as a separate 2D affine transformation from film coords (x,y) to pixel coordinates (u,v):

$$\begin{pmatrix} u' \\ v' \\ w' \end{pmatrix} = \underbrace{\begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ 0 & 0 & 1 \end{pmatrix}}_{\mathbf{M}_{\text{aff}}} \underbrace{\begin{bmatrix} f & 0 & 0 & 0 \\ 0 & f & 0 & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix}}_{\mathbf{M}_{\text{proj}}} \begin{bmatrix} X \\ Y \\ Z \\ 1 \end{bmatrix}$$

$$\mathbf{u} = \mathbf{M}_{\text{int}} \mathbf{P}_C = \mathbf{M}_{\text{aff}} \mathbf{M}_{\text{proj}} \mathbf{P}_C$$

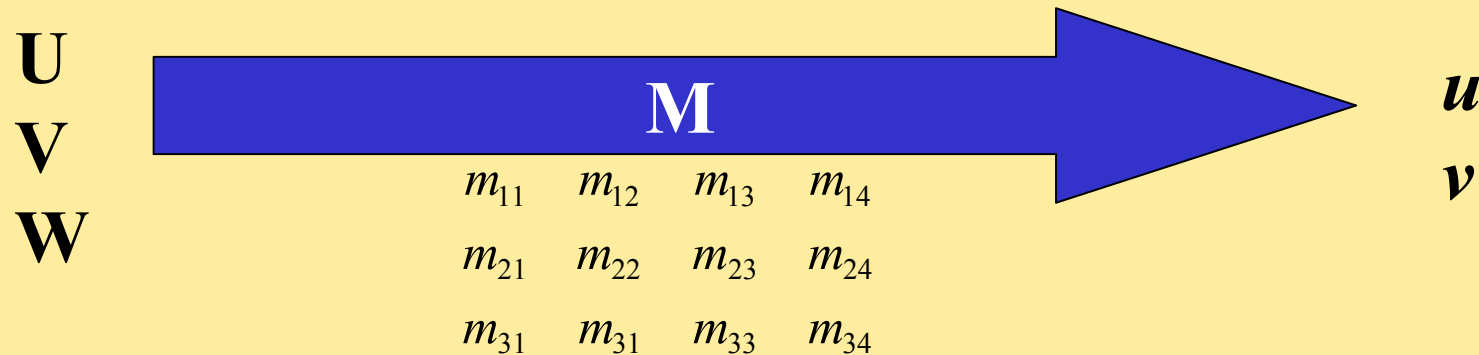

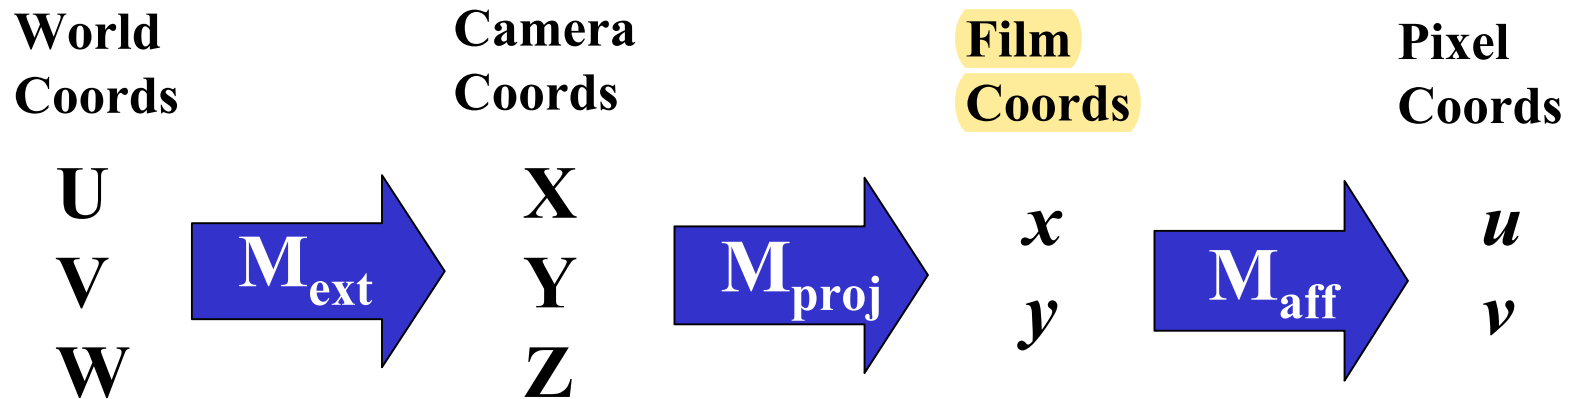

Huh?

Did he just say it was “a fine” transformation?

No, it was “affine” transformation, a type of 2D to 2D mapping defined by 6 parameters.

More on this in a moment...

Summary : Forward Projection

Summary: Projection Equation

$$\begin{array}{c}
 \begin{array}{ccc}
 \text{Film plane} & \text{Perspective} & \text{World to camera} \\
 \text{to pixels} & \text{projection} & \\
 \begin{bmatrix} u \\ v \\ 1 \end{bmatrix} \sim \begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} f & 0 & 0 & 0 \\ 0 & f & 0 & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix} \begin{bmatrix} r_{11} & r_{12} & r_{13} & t_x \\ r_{21} & r_{22} & r_{23} & t_y \\ r_{31} & r_{32} & r_{33} & t_z \\ 0 & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} U \\ V \\ W \\ 1 \end{bmatrix} \\
 \underbrace{\hspace{10em}} & \underbrace{\hspace{10em}} & \underbrace{\hspace{10em}} \\
 \mathbf{M}_{\text{aff}} & \mathbf{M}_{\text{proj}} & \mathbf{M}_{\text{ext}} \\
 \underbrace{\hspace{15em}} \\
 \mathbf{M}_{\text{int}} \\
 \underbrace{\hspace{20em}} \\
 \mathbf{M}
 \end{array}
 \end{array}$$

Lecture 13/14:

Intro to Image Mappings

Image Mappings Overview

FIGURE 1. Basic set of 2D planar transformations

Geometric Image Mappings

$$\begin{aligned}x' &= f(x, y, \{\text{parameters}\}) \\ y' &= g(x, y, \{\text{parameters}\})\end{aligned}$$

Linear Transformations

(Can be written as matrices)

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} \mathbf{M}(\text{params}) \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

Translation

$$\begin{aligned}x' &= x + t_x \\ y' &= y + t_y\end{aligned}$$

equations

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} 1 & 0 & t_x \\ 0 & 1 & t_y \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

matrix form

Scale

$$\begin{aligned}x' &= s x_i \\ y' &= s y_i\end{aligned}$$

equations

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} s & 0 & 0 \\ 0 & s & 0 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

matrix form

Rotation

$$\begin{aligned}x' &= x_i \cos \theta - y_i \sin \theta \\y' &= x_i \sin \theta + y_i \cos \theta\end{aligned}$$

equations

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} \cos \theta & -\sin \theta & 0 \\ \sin \theta & \cos \theta & 0 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

matrix form

Euclidean (Rigid)

$$\begin{aligned}x' &= x_i \cos \theta - y_i \sin \theta + t_x \\y' &= x_i \sin \theta + y_i \cos \theta + t_y\end{aligned} \quad \begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \begin{bmatrix} \cos \theta & -\sin \theta & t_x \\ \sin \theta & \cos \theta & t_y \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

equations

matrix form

Partitioned Matrices

A *partitioned matrix*, or a *block matrix*, is a **matrix** M that has been constructed from other smaller matrices. These smaller matrices are called **blocks** or *sub-matrices* of M .

For instance, if we **partition** the below 5×5 matrix as follows

$$L = \left(\begin{array}{cc|ccc} 1 & 0 & 1 & 2 & 3 \\ 0 & 1 & 1 & 2 & 3 \\ \hline 2 & 3 & 9 & 9 & 9 \\ 2 & 3 & 9 & 9 & 9 \\ 2 & 3 & 9 & 9 & 9 \end{array} \right),$$

then we can define the matrices

$$A = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}, B = \begin{pmatrix} 1 & 2 & 3 \\ 1 & 2 & 3 \end{pmatrix}, C = \begin{pmatrix} 2 & 3 \\ 2 & 3 \\ 2 & 3 \end{pmatrix}, D = \begin{pmatrix} 9 & 9 & 9 \\ 9 & 9 & 9 \\ 9 & 9 & 9 \end{pmatrix}$$

and write L as

$$L = \begin{pmatrix} A & B \\ C & D \end{pmatrix}, \text{ or } L = \left(\begin{array}{c|c} A & B \\ \hline C & D \end{array} \right).$$

Partitioned Matrices

$$\begin{bmatrix} x' \\ y' \\ 1 \end{bmatrix} = \left[\begin{array}{cc|c} \cos \theta & -\sin \theta & t_x \\ \sin \theta & \cos \theta & t_y \\ \hline 0 & 0 & 1 \end{array} \right] \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

$$\begin{bmatrix} \overset{2 \times 1}{p'} \\ \underset{1 \times 1}{1} \end{bmatrix} = \begin{bmatrix} \overset{2 \times 2}{R} & \overset{2 \times 1}{t} \\ \underset{1 \times 2}{0} & \underset{1 \times 1}{1} \end{bmatrix} \begin{bmatrix} \overset{2 \times 1}{p} \\ \underset{1 \times 1}{1} \end{bmatrix} \quad \text{matrix form}$$

$$p' = Rp + t \quad \text{equation form}$$

Another Example (from last time)

$$\begin{pmatrix} X \\ Y \\ Z \\ \hline 1 \end{pmatrix} = \begin{pmatrix} r_{11} & r_{12} & r_{13} & | & t_x \\ r_{21} & r_{22} & r_{23} & | & t_y \\ r_{31} & r_{32} & r_{33} & | & t_z \\ \hline 0 & 0 & 0 & | & 1 \end{pmatrix} \begin{pmatrix} U \\ V \\ W \\ \hline 1 \end{pmatrix}$$

$$\begin{pmatrix} \text{3x1} \\ \mathbf{P_C} \\ \text{1x1} \\ 1 \end{pmatrix} = \begin{pmatrix} \text{3x3} & \text{3x1} \\ \mathbf{R} & \mathbf{T} \\ \text{1x3} & \text{1x1} \\ 0 & 1 \end{pmatrix} \begin{pmatrix} \text{3x1} \\ \mathbf{P_W} \\ \text{1x1} \\ 1 \end{pmatrix}$$

$$\mathbf{P_C} = \mathbf{R} \mathbf{P_W} + \mathbf{T}$$

Similarity (scaled Euclidean)

$$p' = sRp + t$$

equations

$$\begin{bmatrix} p' \\ 1 \end{bmatrix} = \begin{bmatrix} sR & t \\ 0 & 1 \end{bmatrix} \begin{bmatrix} p \\ 1 \end{bmatrix}$$

matrix form

Affine

$$p' = Ap + b$$

equations

$$\begin{bmatrix} p' \\ 1 \end{bmatrix} = \begin{bmatrix} A & b \\ 0 & 1 \end{bmatrix} \begin{bmatrix} p \\ 1 \end{bmatrix}$$

matrix form

Projective

$$p' = \frac{Ap + b}{c^T p + 1}$$

equations

Note!

$$\begin{bmatrix} p' \\ 1 \end{bmatrix} \sim \begin{bmatrix} A & b \\ c^T & 1 \end{bmatrix} \begin{bmatrix} p \\ 1 \end{bmatrix}$$
